The choice of Champions

For decades Versele-Laga has been a concept in international pigeon racing. We offer the general public a wide range of products for pigeon racing: from premium pigeon feeds to supplements, vitamins, natural products and even medications specifically registered for pigeons. Products that have all been developed by a team of specialised nutritionists, vets and top pigeon fanciers.

Over the years, pigeon racing has developed into a semi-professional hobby where nothing can be left to chance to compete at the highest level.

Many champions worldwide rely on our know-how and expertise to achieve the most exceptional successes.

In this "Pointing The Way", you will find valuable knowledge and exclusive schedules of some of those champions. All items are provided with the necessary explanations and tips in detail for clear understanding. In short, the ideal guide to becoming a champion.

The Versele-Laga champions will show you the way to make your dreams come true: "If you can dream it, you can do it!".

Good luck!

PLUS
WITH PERFORMANCE PELLETS

Premium mixtures with Extruded Pellets

Premium pigeon feeds with raw materials of very high quality.

Thanks to the wide variety of raw materials, pigeons receive a tremendously rich and balanced mixture that supports their overall health and performance. The mixtures contain the **extruded Plus pellets**. These pellets are very easily digestible, allowing the body to absorb all the nutrients very quickly. They also contain **additional nutrients**, including vitamins, amino acids and minerals, which pigeons need in specific quantities depending on the period. The Plus mixtures are carefully formulated to ensure that the pigeons receive all the necessary nutrients during each period.

With the Plus mixtures, Versele-Laga guarantees that your pigeons receive everything they need to optimise their performance. This allows you, as a pigeon fancier, to feed your pigeons in an efficient and simple way.

To these mixtures we add Black Label pigeon feed from our Plus range. They contain exclusive black maize of the highest quality, which is particularly rich in antioxidants. These promote pigeons' general health and muscle function, thus improving their overall performance.

The science behind peak performances

As a passionate pigeon fancier, you only want the very best for your racing pigeons. You are fanatical about getting them to top conditions and making sure they stay in top condition. Our Plus range offers premium pigeon feed with only the highest quality raw materials. Thanks to the wide variety of ingredients and the unique extrusion pellets, your pigeons will eat a very rich and balanced mixture. This supports their general health and boosts their performance.

Discover the Power of Extruded Plus Pellets

The secret of the Plus mixtures? That's in the special extruded pellets. These Plus pellets are highly digestible, allowing the pigeon's body to absorb all the nutrients in record time. Moreover, they contain extra nutraceuticals such as vitamins, amino acids and minerals. Depending on the specific period, your pigeons get exactly the quantities they need. This makes feeding your pigeons a piece of cake for you as a pigeon fancier.

Why Choose our Pigeon Feed Plus Range?

It's simple: all Plus mixtures guarantee three key benefits that will boost your pigeons' health and performance all year round, whether breeding, growing, flying or moulting:

The ideal levels of fats, proteins and carbohydrates.

Extra vitamins, amino acids, minerals and antioxidants.

Improved digestion and absorption thanks to esterified butyric acid, digestive enzymes and probiotics.

Plus mixtures contain extruded pellets that support smooth digestion thanks to the production process.

A Sophisticated Mixture of 'Plus' Points Thanks to Unique Extrusion Technology

The extrusion process unlocks the starches and makes the pellet contents more digestible. For example, the proteins from the pellet are absorbed faster into the body and the pigeons will recover more easily, unlike traditional grain mixtures without Plus pellets. Versele-Laga is one of the few manufacturers working with this technology in the production of pigeon feed.

Extruded Pellets Versus Cold-pressed Pellets

Unlike cold-pressed pellets, extruded pellets are much more digestible. Because the ingredients are processed under high pressure and temperature, starches are unlocked, making the nutrients easier to absorb. This allows pigeons to get all the nutrients they need more quickly.

Benefits for racing pigeons:

- Smoother absorption and digestion
- Neutralisation of viruses, bacteria, and fungi
- The round shape of the pellet makes it easier for pigeons to absorb compared to cold-pressed pellets, which are angular. It's well-known that pigeons prefer round grains/pellets to angular and pointed ones.
- Heat treatment deactivates antinutritional factors, such as in legumes.
- Deactivation of spoilage enzymes

With Plus mixes, Versele-Laga guarantees that your pigeons get everything they need to perform well. This makes it easy for you, as a pigeon fancier, to feed your pigeons properly and effortlessly. Good luck breeding your champion pigeons!

Attention: The benefits mentioned above do not apply to similar products from other brands that use cold-pressed pellets. Cold-pressed pellets can be identified by their typical shape, similar to pellets used in chicken feed.

Plus Mixtures: Our Guarantee of Quality

NUTRI-PLUS

The Plus enriched grain mixtures contain ideal levels of fats, proteins and carbohydrates, thanks in part to the added extruded pellet. The various Plus mixtures therefore meet pigeons' nutritional needs all year round. As a result, pigeons achieve top results at every stage: breeding, youngsters, sport, moulting, winter.

DIGEST-PLUS

The Plus enriched grain mixtures contain extruded pellets with additives that support digestion. Thanks to extrusion, nutrients are quickly absorbed into the body. We also add probiotics in the pellet. These positive bacteria promote digestion and help strengthen intestinal flora. In addition, we also add digestive enzymes. These enzymes promote the absorption of nutrients from grains and aid the body's own enzymes in digestion. In addition, the Plus pellets also contain esterified butyric acid to ensure an optimal gut environment and preserve microbial balance.

HEALTH-PLUS

The Plus enriched grain mixtures contain extra vitamins, amino acids and minerals in the right proportions. In addition, the extruded pellet also contains a balanced combination of organic antioxidants such as vitamin C, vitamin E, organic selenium. Together, these elements support the immune system and play a role in disease defence. In addition, the Plus pellets also contain fruit and vegetables for better feed absorption and improved condition.

Opti-claims Plus

In addition to the **3 XACTION** advantages that all Plus mixtures offer, each mixture brings unique and specific benefits – **the Opti-benefits**. Below is an overview of the many specific Opti-benefits for each mixture.

OPTI-BREED

The Plus pellet contains a combination of essential amino acids, proteins, absorbable calcium, L-carnitine, glucosamine, chondroitin and algae powder.. The essential amino acids, proteins, calcium, and vitamin D3 provide the extra building blocks for egg development. In addition, L-carnitine affects the production of crop milk, thus supporting the growth of nestlings. (Glucosamine, chondroitin and algae powder) Thanks to the combination of glucosamine, chondroitin, vitamin C, algae powder, as a rich source of DHA, and vitamin D3, pigeons develop strong bones and maintain supple joints.

Start Plus

Start Plus Black Label

Junior Plus

Junior Plus Black Label

OPTI-GROWTH

The Plus pellet contains a combination of essential amino acids, proteins, and absorbable calcium. The amino acids and calcium provide the additional building blocks to ensure young pigeons grow optimally. (Algae powder + Glucosamine, chondroitin) Algae powder in the Plus pellet, rich in omega-3 fatty acids, combined with vitamin D3, supports strong bones and healthy joints. The added glucosamine, chondroitin and vitamin C further strengthen bone development and contain the essential elements for cartilage and flexible joints.

(butyric acid) In addition, a Plus pellet also contains esterified butyric acid to ensure an optimal intestinal environment and maintenance of microbial balance.

OPTI-PERFORM

The Plus pellet contains lecithin and L-carnitine for optimal fat absorption and fat burning in pigeons. Lecithin aids in dissolving fats in the intestines, resulting in more efficient fat uptake. L-carnitine helps convert fat into energy efficiently in the pigeon's body. This provides pigeons with more energy, making them less prone to fatigue, reducing cramps, and allowing them to fly longer. In addition, the pellets also contain antioxidants, organic selenium and vitamin E, which support the pigeon's condition and reduce oxidative stress. These antioxidants reduce the presence of free radicals in the body, leading to less systematic muscle breakdown. Vitamin C helps reduce stress during transport to the liberation site.

(Glucosamine, chondroitin and algae powder) The Plus pellet contains algae powder, vitamin D3, glucosamine, vitamin C and chondroitin. Together, they support the (wing) joints, which play a crucial role in the performance of racing pigeons.

Champion Plus

Superstar Plus

*Champion Plus
Black Label
Superstar Plus
Black Label*

Base Plus

OPTI-RECOVERY

The Plus pellet contains extra amino acids and high-quality proteins that repair damaged muscles after a race and prepare them for the next flight. Thanks to the extrusion process of the Plus pellet, these proteins digest better, and are quickly absorbed by the body. Pigeons will recover much faster with this mixture, compared to traditional grain mixtures without this pellet. The combination of the antioxidants, vitamin E and selenium, also contributes to rapid post-flight recovery.

OPTI-ENERGY

The Plus pellet contains lecithin and L-carnitine for optimal fat absorption and fat burning. Thanks to these substances, the fat-rich grain mix is efficiently absorbed and utilised in the pigeon's body. This provides the pigeon with more energy and makes it less prone to fatigue. L-carnitine reduces lactic acid formation, resulting in less muscle damage during flight. This allows the pigeon to perform longer and at full strength. Lecithin is also a natural emulsifier. Dietary fats are better dissolved in the intestine, making their absorption more efficient.

Energy Plus

Gerry Plus

Gerry Plus Black Label

OPTI-FIT

The Plus pellet contains added vitamins, antioxidants, amino acids and minerals to keep pigeons in optimal health. (butyric acid) In addition, a Plus mixture also contains esterified butyric acid, which promotes digestion.

(Glucosamine, chondroitin and algae powder) . The Plus pellet contains algae powder, vitamin D3, glucosamine, vitamin C and chondroitin. Together, they support the (wing) joints, which play a crucial role in the performance of racing pigeons.

OPTI-RELAX

The Plus pellet contains extra vitamins, antioxidants, amino acids, and minerals to keep pigeons in optimal health. The pellet also contains vegetables and fruit to promote pigeons' feed intake and condition. Combined with the grain mixture, the pellets form a low-protein and low-fat mixture to keep pigeons in optimal condition during extended periods of little or no activity.

Depure Plus

Winter Plus

OPTI-FEATHER

The Plus pellet contains sulphur amino acids (e.g. methionine) that ensure seamless moulting and feathers of a softer and better quality. Selenium and additional vitamin E also support this.

(butyric acid) The addition of esterified butyric acid ensures optimal intestinal condition, allowing nutrients to be optimally absorbed and utilised to form the new plumage. Thanks to the combination of the Plus pellet and selected grains, the mixture contains an optimal protein content. This is very important during moulting, as feathers consist of 90% keratin (protein). This gives the pigeons a soft and high-quality plumage.

All the Plus mixtures contain the following vitamins and trace elements:
 Vitamins : A, D3, E, K3, B1, B2, B3, B12, C, PP, Folic acid, Biotin, Choline chloride.
 Minerals and trace elements: Calcium, Phosphorus, Magnesium, Sodium, Iron, Manganese, Zinc , Copper , Cobalt , Selenium.

How to teach your pigeons to eat pellets?

What if your pigeons do not eat the Plus pellets immediately? How can you get them accustomed to extruded pellets? Here's a detailed guide to help them adjust to their new diet.

We recommend transitioning to a Plus mixture with extruded pellets after the moulting period, during a resting phase. This gives your pigeons time to adjust to the new feed. There are two approaches:

1. Immediate Transition to a Plus Mixture With Extruded Pellets

- In the initial phase, feed your pigeons small quantities so that they are a little hungry and more likely to eat the pellets. Preferably, give your pigeons half a portion on the first day, making them almost obliged to eat the pellets.
- If you have the necessary time during the day, it is even advisable to spread this half portion over 3 or 4 servings throughout the day. This way, you will encourage them to eat the extruded pellets each time.
- On the next day, give the pigeons a full portion to ensure they get the necessary nutrients. Then go back to half a portion the day after.
- Within a few days to a week, your pigeons should fully consume the extruded pellets.

2. Indirect Transition to Extruded Pellets

- You can also keep using their familiar grain mixture while gradually introducing the extruded pellets. Start by giving them a little Corn pellet.
- Preferably, give them some Success Corn, then a few hours later, give them half a portion of the regular mixture.
- On the following day, give them Success-Corn again first and then their normal ration of the regular mixture.
- Then you give extruded pellets again and half a portion of the grain mixture.
- Continue this pattern for a week, alternating between pellets and their regular feed, without really depriving the pigeons of nutrients.
- Once your pigeons are comfortable with eating the pellets, switch fully to the Plus mixtures.
- After your pigeons are accustomed to eating the extruded Plus pellets in a specific season, they will readily eat the other Plus mixtures.

Plus Black Label

Six mixtures based on the special black maize

The **PLUS BLACK LABEL** sports mixtures contain 10% black maize (*Zea Mays* L. 'Kculli', sometimes also called purple maize).

This maize originates in Peru and is **much higher in antioxidants** than other traditional types of maize. These are the antioxidants that are responsible for **muscle protection, less muscle cell damage** and **more endurance**.

The levels of muscle-protecting antioxidants are related to the colour of the maize: **the darker the maize, the higher in antioxidants!**

 Vitamins : A, D3, E, K3, B1, B2, B3, B12, C, PP, Folic acid, Biotin, Choline chloride.
 Minerals and trace elements: Calcium, Phosphorus, Magnesium, Sodium, Iron, Manganese, Zinc, Copper, Cobalt, Selenium.

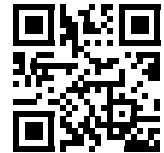

Polyphenols levels in various feed materials

total polyphenols level mg/kg

Polyphenols are a large group of **natural substances** found in **plants** and characterized by the presence of more than one phenol unit per molecule.

Polyphenols are the most abundant **antioxidants** in our diet, and as such protect body cells against oxidative damage.

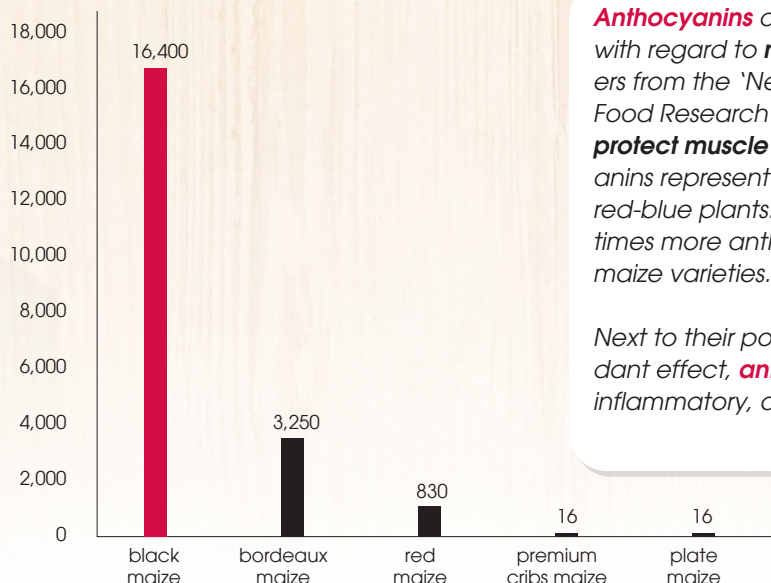

Prevent oxidative stress

Counteracting oxidative stress in physical performance is the common thread in all recent scientific publications on optimal nutrition for athletes.

This is done by providing as many muscle-protecting antioxidants as possible. During flight, pigeons burn glucose and fatty acids in the muscle cells. This produ-

ces waste products (CO₂, free radicals) that damage the muscle cells.

The oxidative stress reduces the energy production and hampers performance. Muscle damage caused by oxidative stress also slows down recovery after exercise.

Anthocyanins are the most important polyphenols with regard to **muscle protection**. In 2010, researchers from the 'New Zealand Institute for Plant & Food Research' demonstrated that anthocyanins **protect muscle cells from oxidative stress**. Anthocyanins represent a very large group of colourants in red-blue plants. **Black maize** contains a thousand times more anthocyanins than the regular yellow maize varieties.

Next to their powerful muscle-protecting antioxidant effect, **anthocyanins** have a natural anti-inflammatory, antibacterial and antifungal effect.

Premium mixtures with high-quality grains and seeds

Our premium pigeon feeds contain exclusive raw materials and top-quality black maize, which is added to these mixtures because it is particularly rich in antioxidants. Those antioxidants support the pigeons' general health and muscle function, improving their overall performance.

With Traditional Premium you choose varied and balanced grain mixtures that can be used in combination with extruded Colombine Corn pellets. This turns the Traditional Premium grain mixtures into complete pigeon feeds, in which everything has been incorporated, to allow your pigeons to perform in the best possible way.

VERSELE-LAGA

TRADITIONAL

High-quality mixtures for optimal results in all periods

High-quality grain mixtures with well-cleaned grains and seeds to prevent dust in the packaging. The mixtures are optimally formulated and therefore contain adjusted protein and fat contents depending to the period.

The Traditional grain mixtures can also be supplemented with the extruded Colombine Corn pellets. This turns the Traditional grain mixtures into complete pigeon feeds, in which everything has been incorporated, to allow your pigeons to perform in the best possible way.

Anyone who wants to make winter breeding a success has to work on the basis of a sound and logical strategy.

1. It is certainly no luxury to lengthen the days artificially 2 weeks before the start of the breeding period.
2. Make sure that the pigeons to be paired already know each other. A pre-coupling period is therefore advisable. Put the cock and hen at 'half-box' for half a day. If the pigeons know each other well, laying will proceed more smoothly and simultaneously.
3. In the evenings, shut the couples in their box. This gives them the time and the opportunity to mate quietly. Also provide some fresh Colombine grit and Redstone so that the hens have plenty of time to take in calcium.

TIP

1. When you wean your young birds, it is very important to make sure that your future champions find the drinker. One tip: stick the heads or all young pigeons into the water bowl, this certainly for the first 2 days after weaning.
2. The relationship between a pigeon and fancier is very important. As soon as the young birds are weaned, it is your job as fancier to work on taming them. Take them in your hands each day, so to speak. This will certainly tame the pigeons and will help you, as a fancier, to get to know them better, or, in other words, to 'feel' their conditions.

Plus, all nutrients in balance

My pigeons keep their basic condition very easily with the Plus mixtures, because they contain all the nutrients in the right proportions.

Great feed is crucial for great results

*We use the Superstar Plus all year round.
We see great results and believe the feed plays
a big part in the pigeons' performance
throughout the year.*

Versele-Laga's Master range is an undeniable asset for us to be successful in pigeon racing.

"The advantages of this premium range and its varied mixtures are strong assets for achieving outstanding results in competitions, from sprints to long-distance races."

Sonia et Philippe Taine

For optimum muscular activity

Thanks to the black maize, the Black Label mixtures are packed with antioxidants. They promote performances during the flight and recovery afterwards. And because black maize contains a lot of sugar, my pigeons also happen to like it very much.

Didier Hofflack

FEEDING PLAN **PLUS / TRADITIONAL / CLASSIC / MARIMAN**

Plus : 100% Winter Plus

Traditional: 100% Breeding & Moulting Olympia + Carrot Corn

Classic: 50 % Classic 4 seasons + 50 % Depurative + Carrot Corn

Mariman: 50% Standard 4 seasons + 50% Depurative + Carrot Corn

1. It is not necessary to train your pigeons every day during the winter period. If they go outside twice a week, it is definitely enough.
2. Always provide the following for your birds and re-fresh daily: Colombine grit with Redstone, Colombine Ideal Bloc Fabry or Colombine All-In-One.
3. Use this 'quiet period' to carry out any necessary improvements and/or repairs to your loft.
4. It is possible to give your birds the vaccinations against paramyxo and, if necessary, paratyphoid during this period. Always consult your veterinarian.

Colombine

Supplements to compensate for deficiencies in the feed

A range of supplements for pigeons that includes products such as grit, redstone, eggfood, complete mineral mixtures, pick stones, picking blocks and feeding accessories.

The Colombine range also includes Extruded Pellets that can be added to a traditional grain mixture to make a complete grain mixture, such as the Plus range.

Colombine

Colombine Corn

Extruded Pellets that strengthen immunity!

Following the Versele-Laga Plus mixtures, as of today the Colombine Corns, the Extruded Pellets, also have been supplemented with the newest ingredients to keep our pigeons as healthy as possible. In addition to the vitamins, amino acids and trace elements already required, 'nutraceuticals' have also been added to the corn products. Nutraceuticals are nutritional elements that improve the condition, health and resistance of pigeons. A unique combination was developed specifically to meet your pigeons' requirements on a seasonal basis. Our new extruded corns are also made with fresh vegetables.

The new Corn pellets are therefore enriched with:

- ✓ M.O.S. (Mannan-oligosaccharides)
- ✓ Adzuki beans
- ✓ Organic selenium

DIGEST-PLUS

The Plus enriched grain mixtures contain extruded pellets with additives that support digestion. Thanks to extrusion, nutrients are quickly absorbed into the body. We also add probiotics in the pellet. These positive bacteria promote digestion and help strengthen intestinal flora. In addition, we also add digestive enzymes. These enzymes promote the absorption of nutrients from grains and aid the body's own enzymes in digestion. In addition, the Plus pellets also contain esterified butyric acid to ensure an optimal gut environment and preserve microbial balance.

HEALTH-PLUS

The Plus enriched grain mixtures contain extra vitamins, amino acids and minerals in the right proportions. In addition, the extruded pellet also contains a balanced combination of organic antioxidants such as vitamin C, vitamin E, organic selenium. Together, these elements support the immune system and play a role in disease defence. In addition, the Plus pellets also contain fruit and vegetables for better feed absorption and improved condition.

3/15 kg

SUCCESS CORN

As their basic feed you give racing pigeons a mixture of pure and healthy grain, pulses and oleaginous seeds. This traditional pigeon mixture is however not a complete feed. Amino acids (including Methionine and Lysine), vitamins, trace elements and minerals in particular are not present in a sufficient quantity. Success Corn was developed specifically to fill the nutritional deficiencies in grain mixtures, especially during the breeding and moulting period.

- increases the protein content to the ideal level and improves the general protein quality
- contains only proteins of vegetable origin, including various leafy vegetables
- supplies a wealth of vitamins and trace elements
- is a Complete prebaked feed with better digestibility as a result
- combined with the traditional grain mixtures, it gives you a fully balanced ration

Use: During the breeding and moulting season: in the morning and in the evening 1.5 teaspoons (= 6g) per pigeon/day

15 kg

ENERGY CORN

Energy Corn is a pellet rich in fat, easily digestible (prebaked), especially developed to increase the energy percentage of the grain mixtures in a scientifically justified manner. Energy Corn supplies vitamins, minerals and amino acids. Especially choline, vitamin E and selenium are highly dosed because of their liver and muscle protecting function. In addition, Energy Corn contains proteins with a high biological value, enriched with essential amino acids (Methionine, Lysine). During the racing season it is recommended to administer Energy Corn together with Oropharma Carmine.

Use: In the morning and in the evening 1 teaspoon (= 4g) per pigeon/day

10 kg

CARROT CORN

Carrot Corn is a very easily digestible, extruded pigeon pellet rich in carrots, to be served as supplement to the pigeon grain mixture. This natural purging diet product helps to keep your pigeons fit without the danger of getting fat.

Use: 1 teaspoon (= 4g) per pigeon/day

FEED SUPPLEMENTS

GRIT + REDSTONE

2.5 kg or 20 kg (bag)
Art n°: 412320/412331

GRIT + REDSTONE

Particular properties:

- contains gastric grinding stones, silex stones, oystershells, seashells, redstone and charcoal
- gastric grinding stones and silex stones are the pigeon's teeth
- ensures optimal digestion
- provides solid droppings
- is washed and sterilized and contains aniseed

Use:

- administer all year round
- make available in a separate tray and refresh daily

REDSTONE

2.5 kg or 20 kg (bag)
Art n°: 412300/412302

REDSTONE

Particular properties:

- source of trace elements and minerals
- supports optimal digestion and absorbs noxious substances in the digestive system
- pigeons enjoy Redstone

Use:

- administer all year round
- make available in a separate tray and refresh daily

NEO-GRIT

2.5 kg (bag)
Art n°: 412221

GRIT

Particular properties:

- contains gastric grinding stones, silex stones, oystershells, seashells, redstone
- gastric grinding stones and silex stones are the pigeon's teeth
- ensures optimal digestion
- is washed and sterilized and contains aniseed

Use:

- administer all year round
- make available in a separate tray and refresh daily

FEED SUPPLEMENTS

PICKSTONE

1x650g
Art n°: 412400

6 x 650g
Art n°: 412401

PICKSTONE

Particular properties:

- the pickstone is like a hard cake that contains trace elements, minerals and salts
- it helps you to keep your pigeons away from the fields
- spirulina (natural bluish green algae) increases resistance against illness and improves fertility and general condition

Use:

- make freely available all year round, including to aviary birds

IDEAL-BLOC

6 x 650g
Art n°: 412900

CLAY CAKE

Particular properties:

- contains minerals and trace elements such as calcium, phosphorus, sodium, iron and zinc

Use:

- crumble a chunk of Ideal-Bloc into a small dish on a daily basis
- administer to breeders, youngsters, racing as well as aviary pigeons
- refresh daily

NATUR-BLOC

clay cake 850g
Art n°: 413000

CLAY CAKE

Particular properties:

- favourable effect on digestion and general health
- solely contains natural products from land and sea

Use:

- offer all year round, including to aviary pigeons
- crumble the Natur-Bloc into a separate dish and administer a small, fresh portion on a daily basis

OPTIMAL-START 25

bucket 5 kg
Art n°: 413331

EGGFOOD FOR BREEDING PIGEONS

Particular properties:

- eggfood in powder form for breeding pigeons and youngsters. Rich in vitamin E - contains 25% in proteins.

Use:

- administer Optimal-Start 25 to future breeding pigeons, starting from 1 month before the pairing
- improves fertilisation
- administer about 10 tablespoons of Optimal-Start 25 per 20 pigeons, serve in a small dish - refresh daily. After weaning, administer the same amount to the youngsters.

FEED SUPPLEMENTS

VITA

pot 1kg, bucket 4 kg
Art n°: 412360/412361

VITAMINS, TRACE ELEMENTS AND MINERALS IN POWDER FORM

Particular properties:

- vitamins, trace elements and minerals in powder form
- indispensable, particularly during the breeding season

Use:

- make available all year round
- may also be mixed into the feed (5 tablespoons per kg of grain mixture)
- refresh daily

ALL-IN-ONE

bucket 10 kg
Art n°: 413321

COMPLETE MINERAL MIX

Particular properties:

- promotes health through the rich and balanced composition of natural ingredients
- rapid intake by the pigeons thanks to the tasty 'Sneaky Mixture' small seed mix and eggfood
- best remedy for squeakers suffering from diarrhoea
- pigeons have shiny plumage and look healthy
- mixture of minerals, vitamins, salts, grit, redstone, stomach gravel, small seed mix, conditioning seeds, coral algae, brewer's yeast, eggfood, clay and plus Extruded Pellets

Use:

- breeding period: one teaspoon in the hatchery trough every day, racing period: provide freely in the loft
- refresh daily

TRAPPING MIXTURES

PEELED PEANUTS SUPERIOR

bag 3 kg or 1 kg
Artn°: 451331/451334

Particular properties:

- Ideal fat source to provide the pigeons with the necessary energy for the flight
- Once the pigeons are used to it, they just love it
- Ideal lure

Use:

- The last few days before basketing, a few peanuts per day.
- With young pigeons, an ideal reward when returning to the loft

HEMPSEED

bag 900gr
Artn°: 451306

Particular properties:

- Stimulating seeds to increase the drive in widowers
- The pigeons ingest it very well
- An extra supplement to the energy tank the last days before the flight

Use:

- During pairing, to increase the drive in pigeons
- During the racing season, to excite the pigeons and to replenish their energy tank

SNEAKY MIXTURE

bag 2,5 kg
Artn°: 412418

bag 20 kg
Artn°: 412469

Particular properties:

- small seeds containing oil and fat which the pigeons like to consume
- contains hempseed in order to stir up the passion of the widowers
- is used to entice pigeons to come inside

Use:

- in the racing season
widowers : 1 teaspoon a day for each pigeon
young pigeons : ½ teaspoon a day for each pigeon
- in the moulting period : 1 teaspoon a day for each pigeon

HYGIENE AND FLOOR BEDDING

WOOD BEDDING N°6-8

N° 6 bag 5 kg or 15 kg N° 8 bag 5 kg or 15 kg
Art n°: 423093/423094 Art n°: 412533/412534

Particular properties:

- extreme level of absorption
- easy to use
- natural product
- long-life product

Use:

- fill with a layer of ± 3 cm
- shake regularly
- change when satiated

LOFT GRANULES

bag 30 l
Art n°: 412530

Particular properties:

Every pigeon fancier knows it: A dry pigeon loft eliminates the chance of illnesses and contributes to your pigeon's health. Loft granules is sterilized at 500°C and especially riddled. Loft granules keeps the loft floor dry and consequently forms a natural protection against coccidiosis, worm infections and other condition underminers.

Use:

- fill with a layer of 3 cm
- change when satiated

BIANCO "BODEMWIT"

bag 5 kg or 20kg
Art n°: 412700/412710

Particular properties:

- makes the pigeon loft dry
- hygienic
- smells good, no nasty odours

Use:

- rub some Bianco on the wet spots in the loft, do this on a daily basis

HYGIENE AND ENVIRONMENT

NEST FELTS

10 pcs
Art n°: 412601

Particular properties:

- Soft nest material especially made for pigeons.
- Prevents eggs in the nest from being damaged easily.

Use:

- Put a nest felt in a nest bowl a few days after pairing, and provide some nesting material.

NEST BOWLS

1 pc
Art n°: 480410

Particular properties:

- Clay nest bowls.
- Ideal to hatch eggs and raise the young.

Use:

- Install one nest bowl per pair in the nesting box during pairing.
- Provide a nest felt and/or nesting material in the nest bowl.

OROPHARMA

Extensive range of medication and health and care products

The Oropharma range consists of electrolytes, vitamins and amino acids, energy and muscle-building performance products, natural products, care products, and hygienic and anti-parasitic products. In addition, the Oropharma range also contains specific registered

medicines for pigeons. Please consult your veterinarian about this.

With the Oropharma products you bring your pigeons to the start in optimal condition.

DEXTROTONIC

FLES 500 ml
Artn°: 480514

Elektrolytes

What are electrolytes?

Electrolytes are 'natural' products based on salts and minerals, such as sulphates, phosphates, calcium, magnesium, chloride, sodium,

Why electrolytes?

During flight a lot of metabolites are created through the muscular exertion in the body, which disrupt the acid-base balance. A lot of minerals are used at the same time during exertion. Recovery and recuperation after a flight can be promoted by giving sugars and minerals. On arrival home it is therefore best to offer a combination of sugars and electrolytes. The sugars will be used immediately to restore the glycogen stocks in the muscles and liver to the right level. Electrolytes can also be given before the flight; this is especially recommended in hot weather.

The ideal energy supplement for racing pigeons: water-soluble electrolytes, trace elements, dextrose, fructose and L-arginine L-aspartate

- increases performance capacity
- quick and optimal recovery after illness
- quick and optimal recovery after heavy exertion
- helps tired pigeons to recover
- for muscular weakness

DEXTROTONIC is a powerful energy supplement. The pigeon can recover quickly by providing it with high levels of dextrose and fructose, direct sources of energy.

L-arginine L-aspartate is added to DEXTROTONIC to overcome fatigue. The electrolytes support the fluid balance and ensure an optimal acid-base balance in muscles and blood. As a result dehydration and disruption of the biological balance is avoided. The trace elements ensure optimal metabolism of fats and carbohydrates. The combination of all these components increases the pigeon's performance capacity.

ANALYTICAL CONSTITUENTS:

Crude protein 1.32 % / Crude fibre 0.00 % / Crude fat 0.00 % / Crude ash 4.49 %
/ Lysine 0 mg/kg / Methionine 0 mg/kg
/ Sodium 7700 mg/kg

ADDITIVES/KG:

Nutritional additives:
E1 - Iron ((Iron sulphate heptahydrate)
412 mg / E6 - Zinc (zinc sulphate, heptahydrate) 767 mg / E5 - Manganese (manganese sulphate monohydrate)
0.6 mg / Arginine aspartate 9368 mg
Preservatives:
E 223 Sodium metabisulphite 560 mg

COMPOSITION:

Saccharose / Sodium chloride / Magnesium sulphate

USE:

3 bottle tops (15 ml) per litre during 2 days before basketing. Increased function through the simultaneous administration of SUPERVIT or OMNIFORM.

GLUCOSE + Vitamins

POT 400 g
Art n°: 460093

Dextrose enriched with vitamins

- promotes recovery after a heavy flight
- is absorbed directly into the bloodstream

GLUCOSE or dextrose is a natural sugar. It is present in a lot of plants, especially in the juice of sweet fruits. It is easy to digest and is absorbed quickly in the blood.

That makes GLUCOSE extremely suitable as a quick energy provider after long exertion. GLUCOSE plays an important role in a lot of organs. It plays a role in the metabolism of sugar and is ideal for transporting to all parts of the body due to its high solubility.

By adding vitamins to the glucose the pigeon is simultaneously provided with important substances for the proper functioning of the metabolism and the pigeon can also recover much faster.

ANALYTICAL CONSTITUENTS:

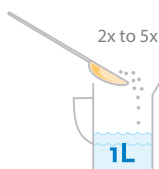

Crude protein 0% / Crude fibre 0% /
Crude fat 0% / Crude ash 0.2% / Lysine
0% / Methionine 0% / Sodium 0.08%

ADDITIVES/KG:

Nutritional additives: 3a672a Vitamin A
50000 IU / 3a821 Vitamin B1 10 mg / Vi-
tamin B2 960 mg / 3a831 Vitamin B6 20
mg / 3a314 Niacin 150 mg
Technological additives:
E310 Propyl gallate 7 mg

COMPOSITION:

Glucose (99.8%) / Sodium chloride

USE:

2 to 5 level tablespoons per litre
of drinking water or Colombine
Tea give on the day of arrival
Freshen solution daily.

RECUP-LYT

BOX 12 x 20 g
Art n°: 460096

A unique blend of electrolytes on a glucose basis

- ensures balanced water in tissues and organs
- helps pigeons recover faster after the competition
- prevents dehydration
- promotes recovery after illness

Electrolytes are salts and minerals. Pigeons lose fluids with important minerals for the body such as calcium, sodium, magnesium, potassium and chloride during heavy exertion. In cases of long term deficiencies of these electrolytes the pigeon becomes less able to retain fluids, their stamina decreases rapidly and the performance reduces greatly.

By giving RECUP-LYT before exertion you give your pigeon the chance to build up fluid and electrolyte reserves. In addition, the fluid-electrolyte balance recovers quickly after the exertion, the lactic acid is discharged more quickly from the muscles and the iron levels in the blood are restored.

USE:

- 1 sachet per litre of drinking water
- During the competition season: Pigeons are very thirsty on arrival; give fresh drinking water + 1 tablespoon of Glucose + Vitamins per litre of water. The drinking water for arriving birds must be brought up to loft temperature in advance. Refresh the drinking water after 2 hours and make Recup-Lyt available until the day after
- For heavy long distance flights: the day before basketing
- During the breeding season
- during the moulting season: once a week
- In cases of intestinal problems (adenovirus, colibacillosis, coccidiosis): give Recup-Lyt daily until the symptoms, such as diarrhoea have disappeared

Freshen solution daily.

ANALYTICAL CONSTITUENTS:

Crude protein 0% / Crude fibre 0% /
Crude fat 0% / Crude ash 7.18% /
Lysine 0 mg/kg / Methionine 0 mg/kg /
Sodium 19600 mg/kg

COMPOSITION:

Glucose / Sodium chloride / Potassium
chloride / Magnesium sulphate / Calci-
um chloride

HEMOLYT 40

POT 500 g
Artn°: 460114

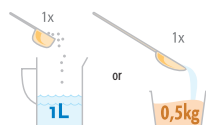

Unique mix of rapidly available animal proteins, minerals, electrolytes, and vitamin B6

- for faster recovery and build up to the next race
- contains 40% haemoglobin-proteins for the creation of the body's own natural haemoglobin
- sustains the formation of red blood cells and promotes the transfer of oxygen to the muscles

A racing pigeon's stamina largely depends on the efficiency of the oxygen supply to the muscles.

A lack of oxygen results in acidification and reduces muscle efficiency. Haemoglobin transports oxygen to the muscles, and pigeons need a very high concentration of haemoglobin in the blood. An easily digestible source of iron is essential to the success of haemoglobin. The proteins in HEMOLYT 40 include all amino acids and haem iron (an easily digestible natural source of iron) to make natural haemoglobin in the body. HEMOLYT 40 as a supplement therefore aids the formation of red blood cells and stimulates a high haematocrit for top performances. It takes 10 days on average to make a red blood cell.

Therefore, it is important to administer HEMOLYT 40 10 to 14 days before the start of the racing season in order to maximize the concentration of haemoglobin.

ANALYTICAL CONSTITUENTS:

Crude protein 40 % / Crude fibre 0% / Crude fat 0% / Crude ash 44 % / Lysine 44000 mg/kg / Methionine 16000 mg/kg / Sodium 105000 mg/kg

ADDITIVES/KG:

Nutritional additives:
Vitamin B6 10000 mg

COMPOSITION:

Haemoglobin-protein / Sodium chloride / Sodium citrate / Calcium lactate / Potassium citrate / Magnesium sulphate

USE:

1 dosage spoon (= 10g) per litre of drinking water or per ½ kg of moistened granules.

It is advisable to administer Hemolyt 40 as a booster 10 to 14 days before the start of the racing season. After that, we advise you to administer Hemolyt 40 in drinking water for 2 days starting from the day after arrival or in feed for 4 feeding sessions. Note: if your bird drinks too much Hemolyt 40 in its fluid, this can result in queasiness, but this will not further impede your bird's condition and recovery.

Increased function through the simultaneous administration of BOOST X5.

Vitamins & amino acids

Why vitamins and amino acids?

Racing pigeons are traditionally fed grain blends and, no matter how well-balanced, they will never be able to provide all the building blocks a pigeon needs to ensure good processing of all its bodily functions. Just like minerals, trace elements, many vitamins and amino acids (especially the essential amino acids) are insufficiently present in grains, vegetables and seeds. Major processes in the pigeon's body can no longer take place as a result of the vitamin deficiency. So, vitamins are vital. In addition there are a number of essential amino acids that the pigeon cannot make itself. If a food or a supplement contains all the amino acids required for the development of the body's protein then it is satisfactory. Another major factor is that the percentage of digestible amino acids must be as high as possible. After all there is a great difference in the quality of the amino acids and proteins. The efficient conversion and use of the proteins and fats provided can also be stimulated by giving L-Carnitine, among others.

B-CHOL

BOTTLE 500 ml
Artn°: 480523

A unique blend based on sulphuric amino acids, biotin, sorbitol and vitamin B12

- promotes plumage growth and moult
- increases appetite and metabolism
- activates digestion
- helps the liver function
- purifies the blood

The removal of harmful substances from the pigeon's body is essential for maintaining good health. B-CHOL stimulates the excretion of bile and the digestion. Methionine and Choline promote the discharge of harmful substances and fats from the liver. After the excretion of harmful substances from the liver biotin stimulates the secretion of bile and sorbitol stimulates the function of the intestines. The combination of these substances results in improved digestion. Administering B-CHOL is recommended after treatment with antibiotics to support the liver function.

By adding Vitamin B12 to B-CHOL the general metabolism is supported and the pigeon develops a good general condition.

B-CHOL promotes the moult through the presence of sulphuric amino acids, such as Methionine. Sulphuric amino acids are essential for the production of keratin, the building blocks for feathers and skin.

ANALYTICAL CONSTITUENTS:

Crude protein 3.06 % / Crude fibre 0 % / Crude fat 0.18 % / Crude ash 0 % / Lysine 0 mg/kg / Methionine 19225 mg/kg / Sodium 109 mg/kg

ADDITIVES/KG:

Nutritional additives: Choline (Choline chloride) 30928 mg / Biotin 19,2 mg / Vitamin B12 19,2 mg

COMPOSITION:

Liquid sorbitol / Saccharose

USE:

2 bottle tops (10 ml) per litre of drinking water

- in the moulting period: 2 days a week
- After a course of antibiotics: 5 consecutive days

Increased function through the simultaneous administration of SUPERVIT

DUCOLVIT

BOTTLE 500 ml
Artn°: 460107

Liquid multi-vitamin preparation

- supports general health
- helps in recovery after illness
- helps during the breeding season

Vitamins are complex organic substances, which the pigeon needs to regulate the biological processes in its body. Vitamins are extremely important for good health. The pigeon is unable to make the majority of vitamins itself and consequently these have to be absorbed through its food.

SUPERVIT

BOX
40 double sachets
Artn°: 460098

A blend of 10 vitamins and 4 trace elements in a powder

- supports the natural resistance against disease
- supports the pigeon's performance
- supports growth
- helps to reach optimal physical and mental fitness

Vitamins are dietary components that do not provide energy directly, but are essential for the correct functioning of the metabolism. With heavy exertion, illness or during growth the supply of vitamins via the food may be insufficient and then SUPERVIT is recommended.

Trace elements play an essential role in the pigeon's metabolism and proper growth in addition to vitamins.

To ensure the top quality of vitamins and trace elements they are both packed separately and air and water tight.

ANALYTICAL CONSTITUENTS:

Crude protein 0.35 % / Crude fibre 0 % / Crude fat 0.3 % / Crude ash 0 % / Lysine 0 mg/kg / Methionine 0 mg/kg / Sodium 160 mg/kg

ADDITIVES/KG:

Nutritional additives:
E 672 - Vitamin A 500000 I.U. / E 671 - Vitamin D3 40000 I.U. / 3a700 - Vitamin E 910 mg / Vitamin B1 180 mg / Vitamin B2 300 mg / Vitamin B6 165 mg / Vitamin K 125 mg / Vitamin B12 0.5 mg / E 300 - Vitamin C 2000 mg / D-Pantothenic acid 2000 mg / Nicotinic acid 1000 mg

COMPOSITION:

Liquid sorbitol / Glycerin

USE:

6 bottle tops (30 ml) per litre of drinking water:
- throughout the year:
once a week
- during periods with an increased need for vitamins (sickness, breeding, heavy exertion):
twice a week
Freshen solution daily.

ANALYTICAL CONSTITUENTS:

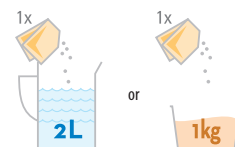

Crude protein 4.14 % / Crude fibre 0 % / Crude fat 0.15 % / Crude ash 6 % / Lysine 427 mg/kg / Methionine 667 mg/kg / Sodium 0 mg/kg

ADDITIVES/KG:

Nutritional additives:
E 672 - Vitamin A 5333000 I.U. / E 671 - Vitamin D3 300000 I.U. / 3a700 - Vitamin E 8000 mg / Vitamin B1 650 mg / Vitamin B2 1900 mg / Pantothenic acid 5500 mg / Niacin 14400 mg / Vitamin B6 1200 mg / Vitamin B12 6 mg / Folic acid 170 mg / E 5 - Manganese (Manganous sulphate, monohydrate) 8200 mg / E 6 - Zinc (Zinc sulphate, monohydrate) 8000 mg / E 4 - Copper (Copper (II) sulphate, pentahydrate) 1050 mg / E 1 - Iron (Ferric ammonium citrate) 10000 mg

COMPOSITION:

Lactose / Magnesium sulphate

USE:

1 double sachet per litre of water (or per kg feed):
- Competition pigeons: once a week (preferably in the middle of the week)
- Breeding pigeons (from pairing): once a week
- Youngsters: once a week
- After treatment against illness (worms, trichomoniasis, coccidiosis, snot, paratyphus, paramyxovirus, etc.): 2 consecutive days (after treatment against the disease)
- During the moult: once a week
Freshen solution daily.
Oplossing dayelijks verversen.

VITAMINS & AMINO ACIDS

OMNIFORM

BOTTLE 500 ml
Artn°: 480513

Water-soluble vitamins and amino acids

- improves condition
- to acquire maximal energy
- quick recovery of tired and exhausted pigeons
- promotes endurance
- supports the muscles

During the racing or breeding season pigeons have a greater need for vitamins and amino acids. The unique composition of vitamins and amino acids in OMNIFORM ensures an optimal condition and build up of reserves. The protein balance in exhausted pigeons recovers very quickly thanks to the high bioavailability of free amino acids. The metabolism is quickly activated, resulting in greater endurance.

ANALYTICAL CONSTITUENTS:

Crude protein 4.79 % / Crude fibre 0 %
/ Crude fat 1.02 % / Crude ash 0.41 %
/ Lysine 3150 mg/kg / Methionine 1575 mg/kg / Sodium 1400 mg/kg

ADDITIVES/KG:

Nutritional additives: E 672 - Vitamin A 1500000 I.U. / E 671 - Vitamin D3 80000 I.U. / Vitamin B1 250 mg / Vitamin B2 250 mg / Vitamin B6 150 mg / Vitamin B12 1 mg / E 300 - Vitamin C 10000 mg / 3a700 - Vitamin E 15000 mg / Vitamin K3 25 mg / Vitamin PP 200 mg / Biotin 3 mg / Choline chloride 21073 mg / D-Pantothenic acid 500 mg / L-Cystine 200 mg / L-Tryptophan 300 mg / L-Arginine 1252 mg / L-Threonine 840 mg / L-Isoleucine 800 mg / L-Leucine 1500 mg / L-Valine 800 mg / L-Histidine 400 mg / L-Tyrosine 400 mg / Glycine 1752 mg / L-Glutamine 4000 mg / Asparagine 1752 mg / L-Proline 800 mg / L-Serine 800 mg / L-Alanine 2500 mg

COMPOSITION:

Liquid sorbitol / Glycerin

USE:

2 bottle tops (10 ml) per litre of drinking water

- during the racing season the day before basketing
- during the breeding period once a week

Increased effect by administering together with OROVITAL

CARMINE MEGA FORTE + L-CARNITINE

DISPENSER BOTTLE 250 ml
Art n°: 460079

Highly concentrated L-Carnitine preparation enriched with vitamins B6 and B12.

- Highly concentrated L-Carnitine solution (15%)
- Performance enhancement and extra energy
- Faster muscle recovery, due to the high magnesium content
- Stimulates production of crop milk

Pigeons use a lot of energy during the race. Carmine Mega-Forte contains a high concentration of L-Carnitine which provides the mitochondria, the energy producers of the body, with sufficient nutrients for the production of additional energy. By administering L-carnitine, less lactic acid is produced in the muscles and the pigeon has a longer stamina during the flight. The added magnesium in Carmine Mega-Forte also ensures much faster muscle recovery after work. The extra vitamin B12 stimulates the fat metabolism and the extra vitamin B6 increases the production of carnitine in the body.

In the breeding period we also see a better production of crop milk so that the youngsters in the nest grow up better and faster.

ANALYTICAL CONSTITUENTS:

Moisture content 83.5% / Crude protein 7.5% / Crude fibre 10% / Crude fat 0.5% / Crude ash 0.5% / Lysine 0% / Methionine 0% / Sodium 0.01%

ADDITIVES/KG:

Nutritionele toevoegingsmiddelen:
3a910 L-carnitine 150 g / 3a831 vitamin B6 0.112 g / Vitamin B12 0.002 g / 3b405 3b405 Cupric sulphate, pentahydrate 2 g

COMPOSITION:

Magnesium sulphate / Sodium chloride

USE:

Directions for use: 1 measure (= 10 ml) per litre of drinking water
1. Short distance: during 3 days before basketing
2. Middle distance: during 4 days before basketing
3. Long distance: during 7 days before basketing

FORM-MIX PLUS + RED BEETROOT

POT 350 g
Art n°: 460094

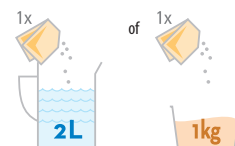

Condition powder with vitamins, amino acids, trace elements and red beetroot powder

- promotes condition in a natural way
- supports performances
- supports the natural resistance to disease
- improves endurance performance

Vitamins are vital to life, they convert food into energy, they play a role in the growth and repair of tissue. They also help the pigeon to build resistance against all kinds of diseases. The unique composition of the amino acids and vitamins in FORM-MIX PLUS ensures an optimum condition and the buildup of reserves. Red beetroot ensures an improvement in endurance performance of up to 16%. Red beetroot is a nitrate-rich vegetable and precisely these nitrates ensure a more efficient use of the available amount of oxygen. The nitrates are converted in the body into nitrite and then into nitric oxide (NO). NO lowers the blood pressure and at the same time it plays a role in the body's own immune system. Red beetroot also reduces

oxygen consumption during exertion so that the pigeons can sustain flying by up to 16% longer.

USE:

Moisten your grain mixtures with 1 tablespoon FORM-OIL PLUS to 1 kg of feed. Add 1 measuring spoon of FORM-MIX PLUS powder, stir it vigorously and let it dry for 1 to 2 hours.

- Racing season: 1 day per week (both morning and evening) and preferably about 2 days before basketing
- Young pigeons: from weaning 1 day per week (both morning and evening)
- Breeding and moulting season: 2 days per week (both morning and evening)
- Show pigeons: outside the show season 1 day per week. During the show season 2 days per week (morning and evening)

ANALYTICAL CONSTITUENTS:

crude protein 2.7%, crude fibre 0.1%, crude fat 0.6%, crude ash 3.5%, lysine 1.43%, methionine 1.9%, sodium 0%

ADDITIVES/KG:

Nutritional additives: 3a672a vitamin A 950000 IU, E671 vitamin D3 210000 IU, 3a700 vitamin E 7300 mg, 3a710 vitamin K3 635 mg, 3a821 vitamin B1 830 mg, vitamin B2 3300 mg, 3a841 calcium D-pantothenate 2300 mg, 3a831 vitamin B6 1250 mg, vitamin B12 5 mg, 3a300 vitamin C 12500 mg, 3a314 niacin 16700 mg, 3a316 folic acid 310 mg, 3a880 biotin 31 mg, E1 iron (ferrous sulphate, monohydrate) 2300 mg, E4 copper (cupric sulphate, pentahydrate) 475 mg, E5 manganese (manganous sulphate, monohydrate) 4700 mg, 3b605 zinc (zinc sulphate, monohydrate) 4250 mg, 3b202 iodine (calcium iodate, anhydrous) 95 mg, 3b8.11 selenium (selenomethionine produced by Saccharomyces cerevisiae NCYC R397, sensitised yeast inactivated) 19 mg
Technological additives:
E321 butylated hydroxytoluene (BHT) 190 mgg

COMPOSITION:

glucose, red beetroot powder (5%), maltodextrin

Energy & muscle build performance

Year in year out, pigeon fanciers search for products to promote flight performance in one way or another. It is important to remember here that good performance is only possible with quality pigeons in optimal health. Top-level athletic performance requires the efficient use of large quantities of energy for the contraction of the muscles. The energy is taken from the muscle cells through the combustion of fats, carbohydrates and proteins. This energy is subsequently stored in the body's cells in the form of ATP (Adenosine triphosphate). The essential energy supply can consequently be increased by using oils. It is important hereby to give the right ratio of omega-3 and omega-6 fatty acids. An extra supplement of vitamin E not only ensures increased drive but also less waste materials in the cells.

FERTI-OIL

BOTTLE 250 ml
Art n°: 460103

Wheat germ oil enriched with vitamins A, D3 and E (fertility vitamin)

- decreases the risk of unfertilized eggs
- promotes a simultaneous and easy lay
- stimulates the drive of widowers

Wheat germ oil is the foodstuff richest in vitamin E. In addition to the antioxidant vitamin E and selenium it also contains beta-carotene and high level of unsaturated fatty acids and top quality lecithin. The combination of these components with the right amounts of vitamin A and D3 has a double effect in breeding: the pigeons have a greater drive and will all lay their eggs at approximately the same time. In addition the likelihood of unfertilized eggs is much lower. The widower has greater drive and achieves a high level of condition.

ANALYTICAL CONSTITUENTS:

Crude protein < 0.3 % / Crude fibre < 0.5 % / Crude fat 99.6 % / Crude ash < 0.4 %
/ Lysine 0 mg/kg / Methionine 0 mg/kg
/ Sodium < 200 mg/kg

ADDITIVES/KG:

Nutritional additives:
E 672 – Vitamin A 500000 I.U. / E 671 – Vitamin D3 100000 I.U. / 3a700 – Vitamin E 2000 mg

COMPOSITION:

Wheat germ oil (98.77 %) /
Maize germ oil

USE:

- 1 teaspoon (5 ml) per kg of grain
 - as preparation for breeding: give daily from 8 days before pairing until the second egg is laid.
 - for the widowers: about two days at the end of the week
- Make fresh daily.

FIT-OIL EXTRA VITAMINE E

POT 300 capsules
Art n°: 460082

Cod-liver oil capsules with extra vitamin E

- supports the fertility
- develops drive in widowers
- promotes the growth of young pigeons

FIT-OIL is a natural source of vitamin A and D3 and is rich in polyunsaturated fatty acids, such as essential omega-3 fatty acids. Vitamin A or retinol is important in building up the skin, fertility and growth. In young pigeons vitamin D3 is essential for the correct development of the bone structure. The extra supplement of vitamin E (fertility vitamin) promotes the drive. Vitamin E, a strong antioxidant, and omega-3 fatty acids benefit the general health of your pigeons.

In addition FIT-OIL is a good source of phosphorus and iodine. Both minerals promote resistance and energy.

ANALYTICAL CONSTITUENTS:

Crude protein 18.12 % / Crude fibre 18.20 % / Crude fat 0.05 % / Crude ash 0.03 % / Lysine 7886 mg/kg / Methionine 1126 mg/kg / Sodium < 100 mg/kg

ADDITIVES/KG:

Nutritional additives:
3a700 - Vitamin E 38723 mg

COMPOSITION:

Cod-liver oil (63.8 %) / Gelatine

USE:

- 1 capsule administered directly in the beak
- in the breeding period: give daily from 8 days before pairing until the second egg is laid
 - during the racing season: the last 3 days before basketing
 - young growing pigeons twice a week

FORM-OIL PLUS

BOTTLE 500 ml
Art n°: 460106

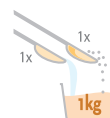

Energy-rich oil mix based on 14 different oils

- helps to build condition
- helps to strengthen the immune system
- ideal energy supplier

FORM-OIL PLUS consists of 14 different oils rich in omega-3 and omega-6 fatty acids. Omega-3 and omega-6 fatty acids are essential fatty acids that the pigeon cannot produce itself and which therefore need to be absorbed from the diet. The correct ratio of omega-3 and omega-6 fatty acids is important for a proper functioning of the cells in the pigeon body. The oils are important nutrients for the nervous system and the cell walls. In addition, fats are important in the production of hormones and provide the pigeon with energy.

FORM-OIL PLUS also contains high-quality lecithin. Lecithin helps digest fats and convert them into energy, which is essential for a good flight. In addition, FORM-OIL PLUS also contains additional beta-carotene - this increases resistance to disease and supports the working of the eyes. Beta-carotene is also an antioxidant, which protects the cells in the body against the damaging effects of free radicals.

ANALYTICAL CONSTITUENTS:

Crude protein 0.67% / Crude fibre 0% / Crude fat 99.8% / Crude ash 0.65% / Lysine 0 mg/kg / Methionine 0 mg/kg / Sodium < 100 mg/kg

ADDITIVES/KG:

Nutritional additives:
E 160a - Beta-carotene 500 mg
Technological additives: E 320 BHA 480 mg / E 310 Propyl gallate 160 mg

COMPOSITION:

Groundnut oil / Thistle oil / Grape seed oil / Olive oil / Rapeseed oil / Soya lecithin / Maize oil / Sesame oil / Wheat germ oil / Salmon oil / Sunflower oil / Linseed oil / Palm oil / Garlic oil

USE:

- Moisten your grain mixtures with 1 tablespoon of FORM-OIL PLUS to 1 kg of feed. Add 1 measuring spoon of FORM-MIX PLUS powder, stir it vigorously and let it dry for 1 to 2 hours. FORM-OIL PLUS should only be served with grains (NEVER in the drinking water).
- Flight season: Mix FORM-OIL PLUS as instructed and provide 2 to 3 times a week with the feed
 - Young pigeons: Mix FORM-OIL PLUS as instructed and provide twice a week with the feed

ENERGY & MUSCLE BUILD PERFORMANCE

BOOST X5

POT 500 g
Artn°: 460116
POT with 350 capsules
Artn°: 460120

Unique mixture of natural products including amino acids, Grape seed extracts, ginseng and gamma-oryzanol for maximum support of the muscles and energy production during flights

- muscle-building effect
- less muscle breakdown during flights
- increased stamina
- improved immunity

Pigeons consume a lot of energy during the race. Therefore, their muscles need a constant supply of ATP (= fuel for the cell). The muscles can call upon various sources of energy to make ATP : phosphocreatine, glycogen, glucose from the blood, and fatty acids from the fatty tissue. Gamma oryzanol has an anabolic effect. It builds up tissue and provides extra strength and increased muscle mass. In addition, gamma oryzanol also has an anti-oxidative effect. BOOST X5 also contains BCAA (branched chain amino acids) which are used mainly to provide the muscles with energy and thereby reduce fatigue. BOOST X5 is also rich in glutamine, and this plays an important part in producing and storing glycogen, a chain of glucose molecules. When pigeons exert themselves, they draw on these chains as the first energy reserves in the muscle cell.

MUSCLE POWER

POT with 150 capsules
Artn°: 460139

Energy, muscle building and recovery

- Quicker and better muscle building
- Less muscle damage during flights
- Better flight results
- Less exhaustion and better regeneration

Muscle Power Caps are BCAAs or Branched-Chain Amino Acids. These are three essential amino acids with a branched structure: valine, leucine and isoleucine. Essential amino acids are amino acids a body needs in order to function well.

The BCAAs should therefore be administered externally, through food or dietary supplements. Recently, these BCAA supplements made their appearance in cycling and athletics, where they already led to brilliant results. Now, this unique product is also introduced in pigeon racing.

ANALYTICAL CONSTITUENTS:

Crude protein 21% / Crude fibre 7% / Crude fat 15% / Crude ash 8% / Gamma-Oryzanol 2200 mg/kg / Glutamine/ Glutamic acid 16000 mg/kg / Isoleucine 1500 mg/kg / Leucine 2900 mg/kg / Valine 1650 mg/kg / Lysine 700 mg/kg / Methionine 850 mg/kg / Sodium 80 mg/kg

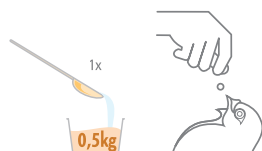

ADDITIVES/KG:

Nutritional
L-Carnitine 35000 mg

additives:

COMPOSITION:

Stabilized rice bran (source of Gamma-Oryzanol) / Hydrolysed wheat gluten protein / Siberian ginseng (1%) / Grape seed

USE:

Administer with feed 2 days a week (1 measuring spoon = 15g on 0.5kg of dampened granules) or place 1 capsule per pigeon in its beak in the morning and evening. Increased function through the simultaneous administration of HEMOLYT 40.

ANALYTICAL CONSTITUENTS:

crude protein 69.5%, crude fibre 0.3%, crude fat 1.6%, crude ash 0.9%, lysine 0%, methionine 0%, sodium 0%

TOEVOEGINGSMIDDELEN/CAPSULE:

Nutritional additives: 3c370 L-valine 150 mg, 3c3.8.1 L-isoleucine 150 mg, 3a831 vitamin B6 2.8 mg, Sensory additives: L-leucine 300 mg

COMPOSITION:

Cellulose, silica

USE:

How to administer?

- in preparation for the race: the last two days before basketing, in the evening place 1 Muscle Power Caps in the bill
- after the race: for a good and quick recuperation, immediately after returning home place one Muscle Power Caps in the bill and repeat it the next day

GARLIC OIL

BOTTLE 250 ml
Art n°: 460104

Pure garlic oil

- promotes condition
- ensures better blood circulation through the body
- improved function of the respiratory system and the digestive system

Natural products

Pigeon racing today is no longer to be compared to that of 50 years ago. However, we must not forget to keep our pigeons as naturally as possible. Many fanciers sometimes all too often think that giving medicines is without risk, but take it from us, medicines must be considered a necessary evil. For that reason we recommend locking the medicine cupboard once the season is over and letting nature take its course.

When giving natural products, such as garlic, brewer's yeast, Echinacea, ginseng, etc., we must always bear in mind that such natural products only have an impact if given over a longer period and on a regular basis.

Garlic (*Allium Sativum*) is probably the most commonly used plant throughout history because of its broad health promoting function.

Garlic contains unique and high active sulphuric bounds, the main one being allicin. That is also the source of the plant's healthy characteristics.

ANALYTICAL CONSTITUENTS:

Crude protein 0 % / Crude fibre 0 % / Crude fat 100 % / Crude ash 0 % / Lysine 0 mg/kg / Methionine 0 mg/kg / Sodium 0 mg/kg

ADDITIVES/KG:

Nutritional additives:
3a700 - Vitamin E 140a0 mg

COMPOSITION:

Soya bean oil / Garlic oil

USE:

- 1 teaspoon per kg of grain in combination with B-Pure.
- in the winter, breeding and racing seasons: 1 day a week
 - in preparation for the racing season: for 1 whole week
 - moulting season: 2 days a week
- Make fresh daily

NATURAL PRODUCTS

RESPI TOP

BOTTLE 100 ML
Artn°: 460142

Natural product that consists of a unique combination of essential oils.

- Unique product based on essential oils
- Keeps the airways healthy and promotes performance
- Highly concentrated: 1 bottle of 100 ml for 500 litres of drinking water

Respi Top and Intestinal Top are natural products with a very efficient and preventive effect against many common problems in pigeons. By using these products preventively, we avoid excessive use of medication with pigeons and therefore prevent the development of resistance to medication. These products therefore work both in the short and long term.

Respi Top is used preventively to avoid respiratory problems. These problems often occur in racing pigeons and also have a performance-reducing effect.

With the launch of Respi Top, we want to further respond to the trend of keeping pigeons healthy in a natural way.

INTESTINAL TOP

BOTTLE 500 ML
Artn°: 460143

Triglycerides of fatty acids enriched with turmeric.

- Gives an energy boost (through the production of ketones)
- Helps create a favourable intestinal environment
- Helps displace harmful microorganisms

INTESTINAL TOP is a scientifically formulated dietary supplement based on esterified medium-chain fatty acids. An ideal combination of butyric acid, caprylic acid, capric acid and lauric acid, esterified to allow good absorption.

Ensures an optimal intestinal environment, thus inhibiting the growth of harmful micro-organisms. Daily administration contributes to good intestinal functioning and increases the resistance to digestive problems (including in young pigeons).

Moreover, the unique composition of INTESTINAL TOP will provide your pigeons with readily available energy in the form of ketones; therefore, helping to improve their condition and sport performance.

ANALYTICAL CONSTITUENTS:

Crude protein 0% / crude fat 0% /
crude ash 0,3% / crude fibre 0% /
moisture content 16% / lysine 0% /
methionine 0% / sodium 0%

ADDITIVES/KG:

Nutritional additives:
3a300 vitamin C 10000 mg
Technological additives:
Eucalyptus oil CoE 185 100000 mg,
L-Menthol (Cas No. 2216-51-5) 50000
mg, oregano oil CoE 317 10000 mg,
thyme oil FEMA 3064 CoE 456/457
10000 mg

COMPOSITION:

Propylene glycol, sorbitol

DIRECTIONS FOR USE:

RESPI TOP can be used all year round. Dosage: 2 to 5 drops per litre of fresh drinking water. Refresh daily.

- Breeding period: 3 days per week
- Young pigeons: from weaning, 3 to 4 days per week
- Moulting period: 3 days per week
- Racing season: 3 to 4 days per week, preferably at the beginning

ANALYTICAL CONSTITUENTS:

Crude protein 0,3% / Crude fibre 0% /
Crude fat 33,2% / Crude ash 0% /
Lysine 0% / Methionine 0% /
Sodium 0% / Moisture content 39,5%

COMPOSITION:

Triglycerides of fatty acids (60%)
Turmeric

USE:

INTESTINAL TOP can be used all year round. Simple dosing by means of the supplied syringe with adapter. Refresh daily.

Breeding period: 1 to 2 ml per litre of water or per 1/2 kg of feed daily
Young pigeons: 1 to 2 ml per litre of water or per 1/2 kg of feed daily from weaning onwards.

Moulting period: 1 to 2 ml per litre of water daily

Flight season:

- On return home and the day after the flight: 2 ml per litre of water or 1/2 kg of feed
- The last 2 days before basketing: 2 ml per litre of water or 1/2 kg of feed

As a supportive treatment for digestive problems (including in young pigeons): 4 to 5 ml per litre of water or per 1/2 kg of feed for about 8 days.

COLOMBINE TEA

BOX 300 g
Art n°: 460100

An optimised herbal tea

- purifies the blood
- relieves the liver
- promotes the digestion
- increases the resistance
- promotes the down moult
- brings your pigeons into a good general condition

COLOMBINE TEA contains 15 herbs with special characteristics. The active components of the parts of the plants selected (flower, leaf, seeds or roots) are beneficial to the pigeons' health.

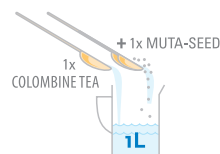

MUTA SEED

BOX 300 g
Art n°: 460101

Optimale selectie van kmoultlingen en zaden

- promotes the moult
- promotes the down moult

The moult is a very important period for pigeons. A pigeon that does not come through the moult well will not feel good and can consequently no longer be expected to realize great things. All the weaknesses concealed in a pigeon's body come to the fore during the moult. MUTA-SEED is a 100% natural product, composed so that it optimally supports the pigeon's body during this important phase when combined with Colombine Tea.

ANALYTICAL CONSTITUENTS:

Crude protein 12.9 % / Crude fibre 20.6 % / Crude fat 4.6 % / Crude ash 7.2 % / Lysine 1800 mg/kg / Methionine 5600 mg/kg / Sodium 400 mg/kg

COMPOSITION:

St John's wort (*Hypericum perforatum* herba) | Common nettle (*Urtica dioica* L. radix) | Dandelion (*Taraxacum officinale* Weber radix) | Caraway (*Carum carvi* semen) | Wild thyme (*Thymus serpyllum* herba) | Fenugreek (*Trigonella foenum-graecum* semen) | Sarsaparilla (*Smilax medica* radix) | White dead-nettle (*Lamium album* herba) | Greater celandine (*Chelidonium majus* herba) | Tansy (*Tanacetum vulgare* herba) | Milfoil (*Achillea millefolium* herba) | Ribwort plantain (*Plantago lanceolata* folium) | Marigold (*Calendula officinalis* flor) | Hazel (*Corylus avellana* folium) | Sage leaf (*Salvia officinalis* folium)

USE:

Boil 1 or more litres of drinking water. Add 1 tablespoon of COLOMBINE TEA + 1 teaspoon Muta-Seed per litre. Allow to brew for 15 minutes, pour it through a sieve and give it to the pigeons as their only drink after it has cooled.

- the first week of widowhood: 8 days without interruption. The moult of the down feathers is stimulated extra as a result.
- During the racing pigeon: the day before basketing add 1 tablespoon of Glucose + Vitamins per litre
- During the moult: a starting treatment of 8 days and then 2 days a week
- Youngsters: 2 days a week all year round

For an optimal response COLOMBINE TEA is recommended always to be given together with Muta-Seed. Freshen solution daily.

ANALYTICAL CONSTITUENTS:

Crude protein 19.1 % / Crude fibre 19.6 % / Crude fat 11.3 % / Crude ash 5.5 % / Lysine 2500 mg/kg / Methionine 9000 mg/kg / Calcium 63000 mg/kg / Sodium 400 mg/kg

COMPOSITION:

Saint John's Wort (*Hypericum perforatum* herba) / Greater Plantain (*Plantago major* semen) / Carrot seed (*Daucus carota* semen) / Parsley (*Petroselinum sativum* semen) / Linseed (*Linum usitatissimum* semen) / Coriander seed (*Coriandrum sativum* semen)

USE:

MUTA -SEED is always given in combination with Colombine Tea. Boil water and then add 1 teaspoon of MUTA -SEED and 1 tablespoon of Colombine Tea per litre of boiled water. Allow to brew for 15 minutes, pour it through a sieve and give as the only drink after it has cooled. The herbal drink made like this should be freshened daily and the drinking bowls should be cleaned afterwards.

- Racing season: 14 days before the start of the season: 8-day course of treatment
- During the racing season: once a week
- Moulting period: 8-day moulting treatment, and then 2 days a week
- Winter season: once a week
- Youngsters: 2 days a week all year round

For an optimal response MUTA -SEED is recommended always to be given together with Colombine Tea. Freshen solution daily and clean the drinking bowls.

NATURAL PRODUCTS

HERBOLAN

BOTTLE 1000 ml
Artn°: 460111

B-PURE

POT 500 g
Artn°: 460099

Herbal drink enriched with spirulina and prebiotics

- for optimal condition
- for increased resistance
- greater stamina
- helps with digestive disorders
- keeps pigeons healthy in a natural way

HERBOLAN is a drink on the basis of health promoting organic acids. The prebiotics (mannan-oligosaccharides, β -glucans) give the healthy intestinal bacteria the nutrition they need to ensure optimal digestion and consistency of the droppings. HERBOLAN also contains spirulina. This algae is one of the richest food sources on earth. They are not only rich in health promoting carotenoids, they also contain a lot of other essential foodstuffs. They contain 10 vitamins, 8 minerals and 18 amino acids (essential and non-essential). Furthermore, spirulina contains a series of trace elements and essential fatty acids.

ANALYTICAL CONSTITUENTS:

Crude protein 0,98 % / Crude fibre 0 % / Crude fat 0,17 % / Crude ash 0,41 % / Lysine 0 mg/kg / Methionine 0 mg/kg / Sodium 661 mg/kg

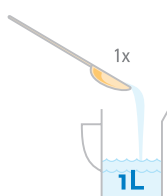

ADDITIVES/KG:

Nutritional additives: Betaine 6750 mg/kg
Technological additives:
E 270 - Lactic acid / E 330 - Citric acid

COMPOSITION:

Propyleneglycol / Malic acid / Phosphoric acid / Betaglucans / Mannan-oligosaccharides / Spirulina / Saint John's Wort (Hypericum perforatum herba) / Greater Plantain (Plantago major semen) / Carrot seed (Daucus carota semen) / Parsley (Petroselinum sativum semen) / Milfoil (Achillea millefolium herba) / Wild thyme (Thymus serpyllum herba) / Linseed (Linum usitatissimum semen) / Coriander seed (Coriandrum sativum semen) / Greater Celandine (Chelidonium majus herba) / Caraway (Carum carvi semen) / Tansy (Tanacetum vulgare herba) / Sarsaparilla (Smilax medica radix) / White Dead Nettle (Lamium album herba) / Blackberry (Rubus fruticosus folium) / Hazel (Corylus avellana folium) / Marigold (Calendula officinalis flor) / Wormwood (Artemisia absinthium herba) / Sage (Salvia officinalis folium)

All these nutrients are easily digestible and are rapidly absorbed in the body.

USE:

1 tablespoon (= 15 ml) per litre of drinking water
- during the breeding season two to three times a week
- during the racing season: once to twice a week
- youngsters: three to four times a week
Freshen solution daily.

Top quality dried brewer's yeast enriched with vitamins

- increases the condition
- increase the training drive in youngsters

Brewer's yeast (*Saccharomyces cerevisiae*) is a very valuable food supplement thanks to the high level of essential amino acids and the wealth of vitamin B, minerals and trace elements.

In addition to the top quality yeast, B-PURE also contains a balanced amount of vitamins which the pigeon needs to regulate the biological processes in its body.

ANALYTICAL CONSTITUENTS:

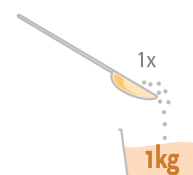

Crude protein 45.4 % / Crude fibre 0.9 % / Crude fat 0.4 % / Crude ash 6.8 % / Lysine 31200 mg/kg / Methionine 4900 mg/kg / Sodium 1080 mg/kg

ADDITIVES/KG:

Nutritional additives: E 672 - Vitamin A 275000 I.U. / E 671 - Vitamin D3 55000 I.U. / E 300 - Vitamin C 750 mg / 3a700 - Vitamin E 625 mg / Vitamin K3 22 mg / Vitamin B1 50 mg / Vitamin B2 96 mg / D-pantothenate, Calcium 300 mg / Vitamin B6 113 mg / Vitamin B12 0,15 mg / Niacin 875 mg / Folic acid 10 mg / Biotin 4 mg / Choline 10813 mg

COMPOSITION:

Brewer's yeast-Saccharomyces cerevisiae (97%) / Sodium chloride

USE:

Mix 1 tablespoon of B-PURE with 1 kg of grains, which have previously had 1 tablespoon of Form-Oil Plus (oil mix) or Garlic Oil poured onto them
- once a week all year round
Make fresh daily.

DIGESTAL

+ FLORASTIMUL

POT 300 g
Art n°: 460091

RECOVERY CAPS

POT with 350 capsules
Art n°: 460123

Intestinal condition with prebiotics

- restores the function of the natural intestinal flora
- inhibits the growth of pathogenic bacteria

There are bacteria in the pigeon's digestive tract which are essential for a good digestion. These good bacteria pre-dominate in a healthy pigeon. However if pathogenic bacteria predominate the pigeon will have watery droppings resulting in a loss of large amounts of fluids and electrolytes.

Administering antibiotics kills both good and pathogenic bacteria. DIGESTAL serves as a food for the good intestinal flora (probiotics) and will also ensure that the pathogenic bacteria are no longer able to adhere to the intestinal wall so that the natural intestinal flora can recover.

ANALYTICAL CONSTITUENTS:

Crude protein 4.56 % / Crude fibre 7.03 % / Crude fat 1.23 % / Crude ash 12.81 % / Lysine 0 mg/kg / Methionine 0 mg/kg / Sodium 38400 mg/kg

ADDITIVES/KG:

Gut flora stabilisers: 4b1820 - Bacillus subtilis C-3102 (DSM 15544) 1 x 10¹¹ CFU

COMPOSITION:

Citrus pulp / Dextrose / Sodium chloride / Mannan-oligosaccharides (MOS)

USE:

1 measure per kg of feed. Dampen the feed in advance, e.g. with FERTI-OIL or FORM-OIL PLUS

- in all cases of watery diarrhoea (e.g. youngster disease)
- in youngsters: preventively two to three times a week from weaning
- on arrival home after the race: for 2 days

Make fresh daily.

Speedy recovery

- feed rich in protein and energy in capsule form to support sick or exhausted pigeons
- promotes recovery of the muscles
- contains lactobacilli, probiotics and digestive enzymes
- promotes the recovery of the normal intestinal and crop flora
- improves digestion and thus better food utilisation

RECOVERY CAPS are specially designed to support exhausted pigeons. Pigeons that arrive home completely exhausted after the flight or pigeons that have difficulty recovering after illness.

RECOVERY CAPS also contain probiotics, prebiotics and digestive enzymes. Bacilli (probiotics) are part of the normal intestinal and crop flora in pigeons. These ensure that the pigeons have a better digestion during the recovery period and after the digestive system starts up again. The administered nutrients are utilised better and the pigeons can therefore recover faster.

The prebiotics serve as a nutrient to support the benign intestinal bacteria. The combination of probiotics and specific digestive enzymes gives the exhausted pigeons a good recovery of the intestinal flora and the digestive system, which is very important in order for the pigeon to return to its full strength.

Capsules to be placed in the beak.

ANALYTICAL CONSTITUENTS:

Crude protein 19% / Crude fibre 1% / Crude fat 15% / Crude ash 8% / Lysine 9350 mg/kg / Methionine 5470 mg/kg / Sodium 3450 mg/kg

ADDITIVES/KG:

E 672 - Vitamin A 7200 IE / E 671 - Vitamin D3 1500 IE / 3a700 - Vitamin E 85 mg / Vitamin K3 3 mg / Vitamin B1 7.5 mg / Vitamin B2 16 mg / Vitamin B3 20 mg / Vitamin B6 6 mg / Vitamin B12 0.03 mg / E 300 - Vitamin C 60 mg / Vitamin PP 80 mg / Folic acid 1.5 mg / Biotin 260 g / Choline chloride 605 mg / E 160a - Beta-carotene 4.35 mg / E2 Iodine (Calciumiodate, anhydrous) 2 mg / E4 Copper (Cupric sulphate, pentahydrate) 10 mg / E5 Manganese (Manganous sulphate,

monohydrate) 100 mg / E6 Zinc (Zinc sulphate, monohydrate) 100 mg / E8 Selenium (Sodium selenite) 0.2 mg

Technological additives:
E558 Bentonite-montmorillonite 30 mg / E310 Propyl gallate 50 mg / E320 BHA 75 mg / E321 BHT 75 mg

Gut flora stabilisers:
Bacillus subtilis C-3102 (DSM 15544) 2186000000 CFU Enzymes: Endo-1,4-beta-xylanase (EC 3.2.1.8) 3279 EPU

COMPOSITION:

Bread flour / Soya protein / Sunflower oil / Rice flour / Glucose / Dicalcium phosphate / Brewers' yeast / Lecithin / Mannan-oligosaccharides (1000 mg/kg) / Organic acids (20 mg/kg)

NATURAL PRODUCTS

OROPHARMA

MEDICINAL PRODUCTS

These veterinarian medicines are marketed in accordance with the Small Animal Exemption Scheme.

TRICHO PLUS

Box of 8 sachets of 4 g
Artn°: 480502
Box of 30 sachets of 4 g
Artn°: 480516

Group treatment of trichomonosis and hexa-mitiasis in the drinking water or on the grains.
Contains ronidazole in powder-form.

- High therapeutic activity against trichomonosis and hexamita
- Effective against anaerobic bacteria
- Broad safety margin
- No harmful effect on racing performance
- Not toxic for young pigeons

Tricho Plus is indicated for the treatment of trichomonosis and Spironucleus infections (Hexamitosis) in racing pigeons, not intended for human consumption. Pigeons are very susceptible to infections with trichomonosis. We then see bad racing performances, more mucus in the throat and in some cases yellow spots in the throat and in the respiratory tract. Before the start of the racing season we give a treatment of 5 days. Also after the racing season and during breeding in the winter, we advise to give a 5-day treatment. During the racing season, a reinfection with trichomonosis occurs frequently. It is necessary to administer 1 sachet of Tricho Plus in 2 litres of drinking water during 2 or 3 days.

USE:
1 sachet of Tricho Plus per 2 litre of drinking water or on 0.5 kg moist feed for minimum 5 days.

In case of insufficient liquid intake (e.g. in the winter): 1 sachet per 1 litre of drinking water.

This veterinarian medicine is marketed in accordance with the small animal exemption scheme.

COMPOSITION:

Per sachet: ronidazole 200mg – Monopotassium hydrogenium phosphate-Lactose q.s. ad 4 g

TRICHO CURE

Box of 40 tablets
Artn°: 480511

Individual treatment of trichomonosis and hexamitiasis.
Contains ronidazole in tablet form.

- High therapeutic activity against trichomonosis and hexamita
- Effective against anaerobic bacteria
- One-time treatment
- Longer lasting due to delayed release
- No harmful effect on racing performance
- Does not cause vomiting

Trichocure is indicated for the treatment of trichomonosis and Spironucleus infections (Hexamitosis) in racing pigeons, not intended for human consumption. Pigeons are very susceptible to infections with trichomonosis. We then see bad racing performances, more mucus in the throat and in some cases yellow spots in the throat and in the respiratory tract. Before the start of the racing season, we give a treatment with a tablet on day 1 and day 3. Also after the racing season and during breeding in the winter, we advise to give twice a tablet. During the racing season, a reinfection with trichomonosis occurs frequently. It is necessary to administer 1 tablet of Trichocure every 2 or 3 weeks.

USE:
Preventive: 1 tablet per pigeon after feeding

Curative: 1 tablet per pigeon after feeding, repeat 2 days later and treat again with 1 tablet 1 week later. This veterinarian medicine is marketed in accordance with the small animal exemption scheme.

COMPOSITION:

Each tablet contains 5 mg of ronidazole.

MEDICINAL PRODUCTS

These veterinarian medicines are marketed in accordance with the Small Animal Exemption Scheme.

AVICAS

Box of 40 tablets
Art n°: 480510

Individual treatment of worm infections (hairworms and roundworms). Contains febantel in tablet form.

- Optimal activity against roundworms (*Ascaridia*) and hairworms (*Capillaria*)
- Active against adult worms and larvae
- Quick, safe and effective action
- Does not cause vomiting or affects condition
- No abnormal feather growth
- Does not cause vomiting

Avicas is a broad-spectrum anthelmintic for oral administration in racing pigeons. We can use Avicas for infections with roundworms and hairworms. Pigeons that are infected with worms will experience the following problems: in the beginning bad racing results and later on green slimy droppings and then they start to become thin and weak. For the treatment of clinical worm infections, 1 tablet should be given and the same dose should be repeated after 8 days. In case of heavy *Capillaria* infection, 1 tablet should be given for two consecutive days and this two-day treatment should be repeated one week later. For routine prophylactic treatment 1 tablet should be given 1 month before the breeding season, and again 1 month before the racing season.

USE:

One tablet per pigeon and repeat after 8 days

With severe *Capillaria* infestation : treat for 2 consecutive days and treat for another 2 days after 1 week.

COMPOSITION:

Each tablet contains 15 mg of the active ingredient febantel.

This veterinarian medicine is marketed in accordance with the small animal exemption scheme.

FORMA DROPS

BOTTLE 15 ml with dropper
Artn°: 460083

Soothing eye drops

- eye care
- eye hygiene
- ideal check of the respiratory tract

Care products

Our pigeons often have a hard time during competitions and while basketed. As a result eye injuries (among others due to fights in the basket) or other injuries occur. During transport the temperatures in the baskets rise significantly and the ventilation often leaves much to be desired. As a result, it is almost impossible to avoid respiratory problems. Consequently it is also important to smother those problems in a natural way at the beginning with eye drops and other respiratory care products.

FORMA DROPS are soothing eye drops. Moreover, this product is ideal for checking the respiratory tract. In healthy pigeons the eye drop must immediately run away via the tear duct after application in the eye. The blue colour should then be visible in the throat. FORMA DROPS are easy to use and in sterile packaging.

COMPOSITION:

Patent blue (4-alpha-(4-diethylaminophenyl)-5-hydroxy-2,4-disulfohenyl-methylidene)-2,5-cyclohexadien-1-ylidene)diethylammonium hydroxide)

USE:

Competition pigeons: one drop in each eye and nostril, on the day of basketing and on arrival home

MUCUS POWDER

POT 30 g
Artn°: 460086

Powder based on vegetable extracts

- stimulant for listless pigeons
- promotes the digestion
- helps to prevent respiratory problems

MUCUS POWDER contains components that positively affect the respiration and digestion. Among other ingredients, yellow gentian, a plant that stimulates the appetite and digestion, and cumin powder that optimizes the intestinal function.

MUCUS POWDER supports the general condition and soothes the respiratory tract.

ANALYTICAL CONSTITUENTS:

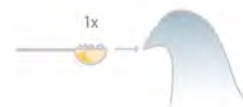

Crude protein 0,79 % / Crude fibre 1,24 % / Crude fat 0,11 % / Crude ash 65,73 % / Lysine 0 mg/kg / Methionine 0 mg/kg / Calcium 57800 mg/kg / Sodium 134000 mg/kg

ADDITIVES/KG:

Technological additives:
E 559 - Kaolinitic clays 76056 mg
Sensory additives:
Gentiana lutea 25352 mg / Cuminum cyminum 11268 mg

COMPOSITION:

Sodium bicarbonate / Calcium carbonate / Sodium sulphate / Magnesium sulphate / Lactose / Vegetal carbon; (charcoal)

USE:

1 spoon of powder administered directly in the beak
- with problems: in the morning and evening
- during the racing season: give 1 spoon of powder in the beak every Wednesday
- during the moult and winter period: once a week
Attention: when administering MUCUS POWDER one should best take the drinking bowl away for half an hour.

IDEAL BATHSALT

POT 1 kg
Art n°: 460119

Orange bath salt

- makes the feathers supple
- relaxes the muscles
- promotes the down moult
- removes flakes from the skin
- often copied, never equalled

Hygiene & antiparasitics

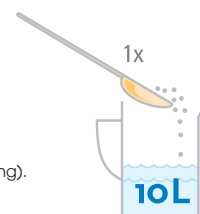

Parasites like lice, mites and so on are an evil in any pigeon loft. In addition to the immediate damage they can cause to the plumage, they also cause unrest among the pigeons.

Pigeons that sit restlessly in the loft for the entire day can never come to the starting line in optimal condition. Consequently it is extremely important to treat pigeons and their accommodation (lofts, baskets, aviaries) with an antiparasitic.

Allowing the birds to bathe regularly is consequently also of the utmost importance for keeping feathers in an optimal condition.

Everyone knows that pigeons like and need to bathe. Regular bathing is essential for maintaining the feathers. Adding IDEAL BATHSALT to the bathwater gives the pigeons supple feathers and helps to maintain the strength and water-resistant function of the plumage.

1 tablespoon per 10 litres of water
 - winter season: 1 bath a week
 - racing season: 1 or 2 baths a week
 - moulting period: 2 baths a week
 Give a free and cold bath (preferably in the morning).
 Make a warm bath obligatory after the race.
 Freshen solution after each bath.

OROPHARMA

YOUR MEDICAL PARTNER FOR RACING PIGEONS!

The Oropharma range offers a total package of medicines for racing pigeons.

With the Oropharma products you can bring them in an optimal condition to make top performances.

The Oropharma antibiotics are P.O.M. products and can only be obtained in the U.K. through your veterinary surgery.

miscellaneous	 FORMA DROPS + MUSCLE POWER	 FORMA DROPS + MUSCLE POWER		 IDEAL BATHSALT			

week 2	Saturday	Sunday	Monday	Tuesday	Wednesday	Thursday basking	Friday
mix with the feed	 INTESTINAL TOP + FORM-MIX PLUS	 INTESTINAL TOP + B-PURE		 FORM-OIL PLUS + BOOST X5	 FORM-OIL PLUS + BOOST X5		
mix with the drinking water	 CARMINE MEGA FORTE	 CARMINE MEGA FORTE	 RESPI-TOP	 DEXTROTONIC	 DEXTROTONIC		
miscellaneous		 IDEAL BATHSALT		 MUSCLE POWER	 MUSCLE POWER		

MOULTING PERIOD

CARING SYSTEM

pigeons in the moulting period

	Saturday	Sunday	Monday	Tuesday	Wednesday	Thursday	Friday
mix with the feed		 INTESTINAL TOP + B-PURE			 GARLIC OIL + B-PURE		 INTESTINAL TOP + B-PURE
mix with the drinking water	 HERBOLAN	 RESPI-TOP	 COLOMBINE TEA + MUTA-SEED	 COLOMBINE TEA + MUTA-SEED	 HERBOLAN	 B-CHOL	 RESPI-TOP
miscellaneous	 IDEAL BATHSALT			 IDEAL BATHSALT			

1. Start the moulting period with healthy pigeons. If necessary, ask your veterinarian to check the health of your pigeons at the start of moulting. If they are healthy, banish all medicines from the loft during the moulting period.
2. Make sure that you have already selected your pigeons before the start of the moulting period in such a way that the remaining pigeons have more space and oxygen in the loft.
3. Take your pigeons regularly in your hands to check the condition and health.

WINTER SEASON

CARING SYSTEM

your pigeons in the winter months

	Saturday	Sunday	Monday	Tuesday	Wednesday	Thursday	Friday
mix with the feed	 GARLIC OIL + B-PURE					 GARLIC OIL + B-PURE	
mix with the drinking water	 HERBOLAN	 RESPI-TOP	 INTESTINAL TOP	 INTESTINAL TOP	 RESPI-TOP	 HERBOLAN	 RESPI-TOP
miscellaneous					 IDEAL BATHSALT		

1. Make sure that your pigeons do not get too fat in this 'resting phase'. After all, fat athletes aren't much use to us at the start of a new season.
2. It is also important during the winter period to keep the pigeons as close as possible to nature. Therefore, never administer medicine unnecessarily in the winter. You should only administer medicine after an illness has been diagnosed and you have consulted your veterinarian.

YOUR SUCCESS IS OUR CONCERN!

Do you have problems, are you looking for some good advice...

As a Versele-Laga customer, you can get help from people who are at home in pigeon racing, people who day in day out work with pigeons and perform well.
